

## JEC Introduces New Hospital Building Design Solutions and Equipment to International Symposium and Exhibition in Beijing

**28 August 2006** - The “International Symposium on Hospital Planning, Design and Equipment and Exhibition” was first held in 1996. Marking its 9<sup>th</sup> Anniversary this year, it has become China’s leading academic forum and showcase of hospital building design and equipment. This year, the three-day symposium and exhibition was held from 15 to 17 August, 2006 at the China World Trade Center, Beijing.

The theme of the 2006 Symposium was “Standards, Safety and Conservation”, and the two main focal points comprised a presentation of domestic and international hospital building designs, and an exhibition of hospital design and products.

Participating delegations came from around the world and included professionals, CEOs of multi-national companies, tertiary medical institutions, construction institutes, national representatives of architectural schools, large scale construction companies, representatives of hospital constructors and suppliers, as well as leading market players in Hong Kong, Macau and Taiwan.

In this exhibition, Jardine Engineering Corporation (JEC) China leveraged its over 80-year heritage and introduced many brand new hospital design solutions. JEC, which is the first integrated business in the industry to use standards, safety and conservation as guiding objectives, presented its modern, technologically advanced standard public sanitaryware system for hospital buildings. This innovative product caught the attention of all symposium and exhibition delegates, having met the World Health Organization (WHO) standards. JEC Public Health & Safety Solutions aims to become the market leader in this industry. Specifically, this solution pays special attention to scientific design through professional installation, quality materials which are easy to clean, maintain, and sterilise to ensure a bacteria free environment. The solution is also touch free, in design, to eliminate the need for direct contact. In addition, all system water pipes are professionally imbedded in wall ducts to isolate water from external contamination, eliminating damp build up in corners, and preventing bacteria growth. This solution also

eliminates the need for additional sanitisation to prevent bacterial growth. JEC also provides special air purifying equipment, ensuring that air quality reaches WHO standards.

Since its establishment 80 years ago, JEC has always strived to introduce world class products into China. JEC is the first to bring in plastic floorings, thus revolutionising the floorings of hospitals and other public infrastructures. This clean, ultramodern flooring material is one of the most popular on the international sanitaryware market and meets the stringent public sanitary standards set by WHO. JEC has also provided steamers, showers, Jacuzzi, and high-end toilet seats in China, contributing to the modernisation and development of the hospital sector. In 2006 JEC are still pioneering through the introduction of JEC Public Health & Safety Solutions, and will continue to provide comprehensive, hi-tech and hygienic product selection to improve the living standards in China and beyond.
